Dear Hiring Manager,

I am excited to apply for the Full Stack Software Developer position at your company. As a US Army Full Stack Software Developer with experience in cybersecurity and UI/UX design, I am confident that I can contribute to your team's success.

In my current role, I developed a training management system that tracks and validates members' training requirements, positions, and titles within the organization's hierarchy. I prioritized cybersecurity and PII protection during the design process and used Python for automation and SQL for database querying.

As a System Administrator and Cybersecurity Analyst for the US Army, I managed and validated system policies and trained multiple soldiers to increase readiness. Additionally, I supervised geographically separate service outages and improved related service processes at the Regional Cyber Command Europe. I established, managed, and troubleshooted a key network as a Tier I/II Technician at the United States Army headquarters Security Assistance Group - Ukraine, using practices that were later adopted as a golden standard. Furthermore, I created a wireless solution to support 300+ assets, improving operations and transactions' reliability, despite challenges.

I have a strong understanding of web development best practices, including responsive design, accessibility, and security. I am comfortable working in agile environments and have experience using Git for version control.

As a Full Stack Developer, I am committed to staying up-to-date with the latest technologies and trends in the industry. I am always eager to learn new skills and technologies to ensure that I can deliver the best possible solutions to clients.

I am excited about the opportunity to bring my expertise to your team and help develop innovative web applications. Thank you for considering my application. I look forward to the opportunity to discuss my qualifications further.

Sincerely,
Hugo Webster
